DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 to 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kataoka (US Patent 5,316,596), which was submitted by applicant in IDS filed April 15, 2002.

Kataoka in claim 2 of column 17 discloses a wear resistant iron alloy composition with constituents whose wt% ranges overlap those recited by the claims. The subject matter as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to have selected the overlapping portion of the range disclosed by the reference because overlapping ranges have been held to establish a prima facie case of obviousness, see *In re Malagari*, 182USPQ549 and MPEP 2144.05.

Also note example P in Table 3 of column 11 which meets the claimed composition except for 0.4% Si. Since applicant has not demonstrated criticality of the Si range, then a composition with 1% Si vs. a composition with slightly less (say 0.4%)Si would depict a mere difference in the proportion of element without any attendant unexpected results, which would not patentably distinguish claim over prior art. Moreover, Kataoka in lines 14 to 18 of column 3 discloses up to 1.5% Si would serve as a deoxidation agent to remove oxides. Moreover, even though example P is a

comparative example, it is still prior art because it has been published and known in the art.

Even though prior art does not teach a valve insert as recited by claim 15, such would not be a patentable difference since using the insert for valve application is merely future and intended use.
